

Why Choose Texas Eye & Laser Center?

As a Cataract Center of Excellence, Texas Eye & Laser Center is focused on providing our cataract patients optimal surgical outcomes by employing the latest breakthroughs in cataract technology and surgical techniques.

Today, we are proud to once again help set the standard in cataract care by introducing our exciting "No-Drop No-Prescription Cataract Care" as an added-value package for our cataract patients who qualify for this revolutionary technique. Our "No-Drop No-Prescription" cataract technique is not only helping our cataract patients enjoy a more optimal outcome, it's also allowing them to be more compliant with their post-operative regimens and saving them hundreds of dollars.

For those who qualify for "No-Drop No-Prescription" cataract surgery, eye surgeons Dr. Brian Ranelle and Dr. Jerry Hu are now able to reduce or eliminate the need for expensive and frustrating post-operative eye drops that traditional cataract patients have to buy. This makes our cataract procedure more convenient and less expensive.

What is “No-Drop No-Prescription” Cataract Surgery?

In an effort to help reduce costs, improve convenience and enhance visual outcomes for our cataract patients, leading cataract specialists Dr. Jerry Hu and Dr. Brian Ranelle are pleased to introduce our revolutionary “No-Drop No-Prescription” Cataract Care package at Texas Eye & Laser Center.

This new option is provided on an ‘added-value’ basis that allows qualified patients the benefit and convenience of reducing or eliminating the need for expensive eye drops following cataract surgery. The traditional eye drop medication regimen calls for up to four weeks of treatment, with as many as three different types of drops.

To perform “No-Drop” cataract surgery, the physician administers a sterile injectable intra-operatively. Once the procedure is over, the anti-inflammatory and anti-bacterial properties of the injection negate the need for post-operative drops and medications.

Patients remain pain-free and comfortable during the “No-Drop No-Prescription” portion of cataract surgery at Texas Eye & Laser Center.

Benefits

Our Three C's of The **“No-Drop No-Prescription” Cataract Care** Package

- **Cost-effective:** The “No-Drop No-Prescription” Cataract Care procedure saves our patients the frustration of filling expensive prescriptions. Depending on the patient's insurance coverage, our “No-Drop No-Prescription” method can save our cataract patients hundreds of dollars on post-operative drops. Reports indicate our method can save Medicare and the insurance industry millions of dollars.
- **Convenience:** We understand the hassle of shopping at various pharmacies in order to fill a prescription for post-operative drops. With the “No-Drop No-Prescription” cataract procedure, our patients can eliminate or reduce the need to put post-operative drops in their eyes after cataract surgery and therefore can spend more time relaxing and enjoying their favorite pastime...instead of shopping for expensive drops.
- **Compliance:** With our “No-Drop No-Prescription” cataract surgery, the medication is administered directly into the eye during your surgery. Our new method of surgery helps to ensure patient compliance and reduce vision and health complications after your cataract surgery. By increasing patient compliance, we're also helping ensure patients enjoy the best possible outcome after cataract surgery.
